Senior Software Developer (NodeJS)

Software developer with a strong background in building resilient and scalable systems using microservices architecture, seeking a senior role in a dynamic project that values professionalism and a positive work culture — aiming for mutual growth, career advancement, and meaningful contribution to the company's success.

Professional Experience

Software Development Engineer *Dec 2023 – Present*
Aug – Dec 2023 (Internship)

CFx Technologies Ltd, Chennai

About the Project - A gamified crypto investment platform where users predict real-time crypto markets and earn CFT tokens.

1. Involved in project ideation, conversion of high-level business requirements to functional modules. Designed and implemented a workable microservices based backend architecture using Express.js
2. Integrated OAuth and Web3 authentication flows in the platform, supporting Google, twitter and wallets like Metamask and Hashpack
3. Incorporated both fiat and cryptocurrency payment gateway workflows and ensured secure processing and high reliability of transactions
4. conducted R&D and POC for third party integrations, implemented solutions based on business requirements
5. Ensured 90% coverage of unit tests for backend APIs for early detection of issues
6. Upgraded deprecated dependencies in the backend services with the recent compatible packages
7. Deployed the services in AWS in DEV, QA and STG environments and coordinated with DevOps personnel for production deployment

Achievements

1. Automated the reporting process of newly onboarded users in Hedera chain that led to better tracking of user participation and eliminated the need for taking manual reports
2. Developed a tool to verify the status of Coinfantasy games, user participation in games and reward distribution to users on the blockchain level. This helps in validating the data in case of discrepancies between database and blockchain

System Engineer *Jan 2016 – May 2018*

Tata Consultancy Services, Chennai

About the Project – Web Application for Product Communication & Analytics team in a multi-national furniture retail chain

1. Worked with cross-functional teams to turn business needs into backend features using Oracle PL/SQL.
2. Improved data flow and backend efficiency, ensuring smooth integration with the frontend.
3. Reduced bugs through thorough testing and debugging across environments.
4. Mentored 3 team members on PL/SQL and backend workflows.

Achievement

Led 22+ Agile sprints and consistently delivered features on time, earning client appreciation for quality and performance.

Skills
